

## Innovative Testsystems impress Experts

Mittwoch, 18 Oktober 2006

Press Release 01/11-01  
Innovative Testsystems impress Experts  
Tralec GmbH

Reinbek/Germany  
(rie)

On the occasion of the international fair electronica 2006 in Munich / Germany the Tralec GmbH presented the exceptional features of their new and innovative foxfamily test systems.

The first product of the foxfamily product range, the optifox, is the state of the art Automatic Optical Inspection System (AOI). The its worldwide unique optical characteristics are as follows: high resolution of less than 10µm with a depth of sharpness of more than 30 mm and with a size of a single picture of 70 x 50 mm. This high end system optifox stands out by its compact installation size and a weight of app. 25 kg.

The international exhibition electronica 2006 was an excellent opportunity for Tralec testsystems to introduce the second product of foxfamily test systems, the pinfox, an electronic test system. The pinfox is extremely adaptable. From tasks involving only a handful of test points implementing simple tests, to tens of thousands of test points involving highly complex functions, pinfox can do it all. pinfox's modular system structure allows for individual or synchronized function testing in either repeating or independent time intervals, or both! From this modular architecture pinfox is able to assemble synthetic instruments to allow itself to adapt to the application at hand. This is a startling yet simple approach to an ever-increasing complex problem.

The MD of Tralec Test systems, Andreas Repenning, placed emphasis on the following aspects: "The optifox and the pinfox are state of the art and innovative test systems, which enable the test engineers, to enter fields of testing they could only dream of in the past. Therefore Tralec is a little bit proud of the fact, that our substantial investment in research and development has lead to such outstanding products. The feedback of the experts confirms that we are on the right track and encourages us to increase our efforts!"
